COMMUNITIES

3 organizations leading the Open-RAN revolution

ORAN-SCF Collaboration

- ORAN-Alliance & SCF have a longstanding collaborative working relationship
- Much shared membership
- Original CA in 2020, primarily focused on information exchange and roadmap alignment
- Subsequently, ORAN changed its operating policies + many more areas of shared interest
- So, an updated and expanded CA has recently been signed 2023-Nov
- Expanded scope:
 - Requirements, Workplans, Development of 5G/6G-(n)FAPI interface specification, Disaggregated architectures, RIC interactions, Management solutions, Test & Verification, and Reference implementations
- Near-Term technical goals:
 - Continued Alignment of specifications
 - Aligned Management Solutions for Split-6 (FAPI/nFAPI) RAN
- Longer-Term technical goals:
 - Reference implementations
 - Test & Verification
- SCF appreciates the cooperative spirit of the O-RAN Alliance leadership community and looks ahead to collaborations that benefit the entire Open-RAN industry.

OAI-SCF Collaboration

- OAI & SCF have a longstanding collaborative working relationship
- Quarterly sync up meetings to exchange information on ongoing activities as well as roadmap ideas
- Two-way collaboration in spec development: Specs from SCF to OAI, implementation feedback from OAI to SCF (leading to updates as needed)
- Presently, OAI has implemented FAPI/nFAPI version 2.0. Implementing the latest FAPI/nFAPI versions under planning.
- SCF appreciates the cooperative spirit of the OAI leadership, especially Irfan and Florian, that resulted in happy collaborations as well as collocated events, such as this one! Thank you!!!

**Together –
We all win !**
